

All data firmly under control:

Distance, time and weight...

DW-1

Exact weight control for optimum vehicle utilisation

The optimum utilisation of the load weight provides protection from excessive loads on tires and vehicles plus, reduces the distance traveled. The PFREUNDT DW-1 makes possible fair, performance-oriented invoicing for drivers and customers.

**Simple fitting, also retrofitting!
For all types!**

Precise and robust: The dumper scale DW-1

Two pressure sensors measure the weight loaded via the working pressure of the tipping hydraulics. That is why the PFREUNDT DW-1 can be fitted on all types of dumpers and even retrofitted on the spot. The robust load cells require absolutely no maintenance.

Multiple evaluations allow for higher efficiency

Date, time, travelling time, standing time, weight transported and distances travelled - with the DW-1 and the weighing electronic WK 50 you have an overview at any time. The result: better assignment planning and more efficient use of the dumpers.

...for all

dumper types

 **PFREUNDT®**

The intelligent solution for all dumpers. Better control - more profit!

The weighing electronic WK 50

records all of the relevant data and indicates them clearly on a large illuminated display, in the local language:

- Date/time
- Time passed since the last weighing
- Distance traveled
- Downtimes
- Overload signal
- Weight
- Code number of the user or of the vehicle

The data can be printed out with daily totals and mean values or recorded on memory cards and read into the data processing system and evaluated.

The advantages:

- Exact recording of capacity of each vehicle/driver over the entire shift.
- Determination of standing times, the travelling times and the average speed, i.e. important for the selection of tyres.
- Records overloading.
- Statistical evaluations through an interface with Microsoft "Excel"®.
- Low cost of acquisition.
